Campaign splits creators can verify

Prepared for JSBC Partners. All example data below is fictional.

The problem

An agency client closes a brand campaign. The fee splits three ways before it reaches the creators: the agency's commission, the manager's share, and the talent pool, divided between the creators on the campaign.

Here is one fictional campaign.

Item	Rule	Amount
Campaign fee	One brand deal	$250,000.00
Agency commission	20% of fee	$50,000.00
Manager share	10% of remainder	$20,000.00
Creator A	60% of talent pool	$108,000.00
Creator B	40% of talent pool	$72,000.00

When the creator asks how the number was reached, the agency's finance team rebuilds it from messages and a workbook. The answer is right, but it arrives slowly and looks improvised.

> Creators judge an agency by whether the money math can be shown, not just paid.

The same example in RevRule

RevRule records the campaign's split as rules when the deal is signed. Inputs: the campaign fee, the agency rate, the manager's share of the remainder, and each creator's share of the talent pool.

Each participant's entitlement is calculated and stored with the deal terms that produced it, ready for the agency or its finance advisors to show the creator.

Participant	Rule applied	Amount owed
Agency	20% of fee	$50,000.00
Manager	10% of remainder	$20,000.00
Creator A	60% of talent pool	$108,000.00
Creator B	40% of talent pool	$72,000.00
Total	Matches campaign fee	$250,000.00

Usage extensions and follow on deals become new events under the same rules, so a creator's full history with the agency stays in one checkable record.

RevRule gives a finance partner a split record the agency can share: creators see the deal math, and the agency's reporting gets easier to defend.
