Client royalty reporting an advisor can stand behind

Prepared for Fusion CPA. All example data below is fictional.

The problem

Entertainment clients split every dollar of receipts by contract: the artist, the producer, the featured artist, and the label, with advances recouped along the way. Franchising clients add royalty and marketing fund reporting on stepped rates. Advisors review both.

Here is one fictional entertainment client in one quarter.

Item	Rule	Amount
Client receipts	One quarter, all releases	$162,000.00
Artist share	50% of receipts	$81,000.00
Recoupment applied	Open advance balance	$14,000.00
Artist net	Share less recoupment	$67,000.00
Producer share	6% of receipts	$9,720.00
Featured artist share	4% of receipts	$6,480.00

When the royalty run lives in a spreadsheet, the review becomes a rebuild. The advisor cannot tell a client why a figure is right, only that the workbook says so.

> Advisors get asked to stand behind numbers they did not calculate. The record behind the number is what matters.

The same example in RevRule

RevRule holds the client's deal terms as rules. Inputs: receipts by release, each participant's rate, and the open recoupment balance.

The advisor's team reviews the rules once. After that, each period's entitlements are calculated and recorded, ready for client questions.

Participant	Rule applied	Amount owed
Artist, net	50% less $14,000 recoupment	$67,000.00
Producer	6% of receipts	$9,720.00
Featured artist	4% of receipts	$6,480.00
Label	Retained share plus recoupment credit	$78,800.00
Total	Matches receipts	$162,000.00

Corrections are added as new entries, so a restated quarter shows both the original figure and the fix, with reasons attached to the record.

For an advisory firm, RevRule is a client facing calculation record: your team reviews the rules, the client sees amounts they can trace.
